**DETAILED ACTION*****Response to Arguments***

Applicant's arguments, see pages 6-9, filed 23 June 2010, with respect to the rejections of claims 1-7 and 15-20 under 35 U.S.C. 103(a) have been fully considered and are persuasive. The rejections of claims 1-7 and 15-20 under 35 U.S.C. 103(a) have been withdrawn. Examiner notes that Applicant's amendments to the claims overcome the previously cited prior art references. Further, Examiner has not discovered any additional prior art which would fully teach any of the pending claims, either in a single reference or in an obvious combination of references. Accordingly, the present application is in condition for allowance.

***Allowable Subject Matter***

Claims 1-7 and 15-20 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claim 1 recites a data processing device. The device includes (1) a storing unit that stores various types of data, the storing unit being capable of being recognized, as an external storage device, by an external personal computer, (2) a function implementing unit, (3) and an interface. The interface (a) is structured to be connected to both the external personal computer and the function implementing unit, (b) interfaces the function implementing unit with the storing unit such that the function implementing unit can read and write various types of data, and (c) when the external personal computer is connected to the interface, interfaces the external

Art Unit: 2625

personal computer with the storing unit such that the external personal computer can read and write the various types of data from and to the storing unit without being recognized by the function implementing unit. Further, the function implementing unit, after instruction data is stored in the storing unit via the interface by the external personal computer without being recognized by the function implementing unit, automatically reads the stored instruction data from the storing unit via the interface, and determines a process to implement one of the one or more functions corresponding to the read instruction data and executes the determined process.

Examiner has not discovered this particular combination of features in the prior art. The closest prior art discovered is the previously cited combination of Margalit (US-6,763,399) and Hull (US-7,375,835). However, the combination does not teach the interface interfaces the external personal computer with the storing unit such that the external personal computer can read and write the various types of data from and to the storing unit without being recognized by the function implementing unit. Further, the combination does not teach the function implementing unit, after instruction data is stored in the storing unit via the interface by the external personal computer without being recognized by the function implementing unit, automatically reads the stored instruction data from the storing unit via the interface.

Since Examiner has not discovered prior art which fully teaches each and every limitation of claim 1, either in a single reference or in an obvious combination of references, claim 1 is deemed to be allowable over the prior art.

Claims 2-7 and 15-20 each ultimately depend from claim 1, and are therefore each deemed to be allowable at least due to their respective dependencies from an allowable claim.

Art Unit: 2625

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
